Teaching the Lessons

I Do

Teacher models the new material activity for the students to see and observe.

We Do

Teachers and students work together through the steps that the teacher modeled during the "I Do" phase. The teacher is a guide. Students will need more than one attempt at practicing with the teacher during this phase.

Teach each group at least 2 times a week.

You Do

Students practice the concept or skill repeatedly until it is mastered. While the teacher is still available as needed during this phase, it is often the phase of just repeated practice and even assessment.

Remember:

I Do – Show it

We Do – Do it together

You Do – They do it by themselves
